

HMIS Release Notes

COVID-19 Reporting

June 16, 2020

What are the changes?

1. COVID-19 Reporting/Extract: New View and Export for COVID-19 Data

Users now have the ability to pull reports for all COVID-19 data in HMIS. Users can filter by a variety of fields and export the data, allowing users to self-serve to get all of the COVID data in a single report.

2. COVID-19 Hotel and Motel Exit Destination

The hotel and motel exit destination data imported into COVID-19 data entry screens is now read-only and all values captured via SmartSheets are now displayed. As hotel clients continue to be managed via SmartSheets per DOH's direction, this will allow users to view the last SmartSheet entry.

3. COVID-19 Testing Dashboard – Projected Recovery Date

COVID-19 Testing dashboard alerts now display a “Projected Recovery Date” when a positive test result is returned. This projected recovery date is 14 days after the testing date and can be edited as needed.

Which users are impacted?

1. COVID-19 Extract: New View and Export for COVID-19 Data

Any user working with COVID-19 data, including testing, recorded symptoms, and hotel/motel data.

2. COVID-19 Hotel and Motel Exit Destination

Any user working with COVID-19 Hotel/Motel data as well as any shelter provider managing clients in hotels.

3. COVID-19 Testing Dashboard – Projected Recovery Date

Any user working with COVID-19 testing data and COVID-19 positive clients.

How does this help?

1. COVID-19 Extract: New View and Export for COVID-19 Data

An optimized view of COVID-19 data allows quick review and filtering of data, including

common demographics, COVID-19 medical data, and income levels at various program events dates. This is useful for reporting, planning, and client review.

2. COVID-19 Hotel and Motel Exit Destination

Any user working with COVID-19 Hotel/Motel data will be able to see complete exit data as supplied by Smartsheets imports. Previously a smaller subset of exit data was displayed. Data entry for exit destination is not being collected via CT HMIS per DOH guidance for this phase of hoteling, and this field is now read-only.

3. COVID-19 Testing Dashboard – Projected Recovery Date

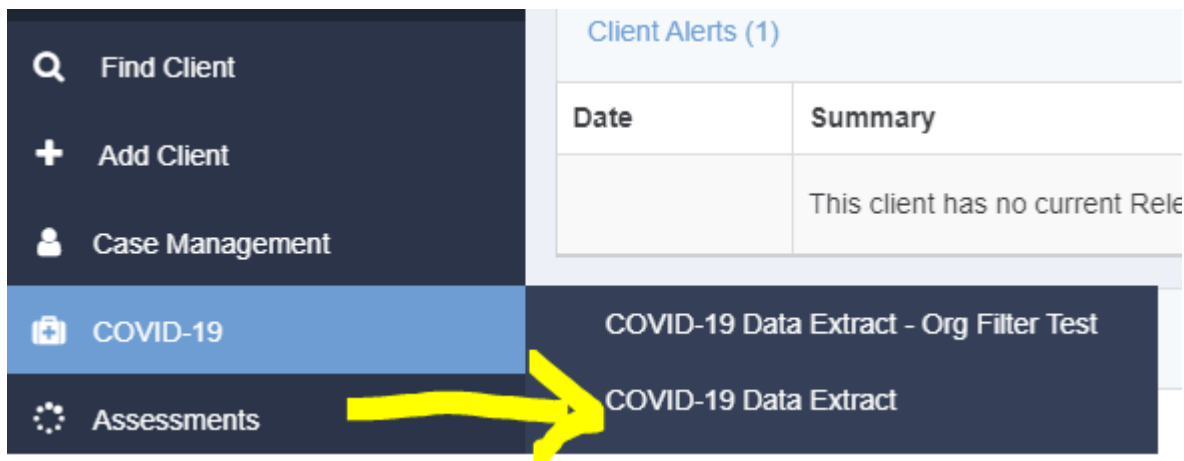

This additional column aids providers in assessing when a COVID-19 positive person may be recovered and able to exit isolation. This is meant to be a general guide following the 14-day isolation protocol per the CDC guidance, and can be edited by the user.

[When will I see this change in HMIS?](#)

This change is expected to be rolled out on Wednesday, June 17th, 2020.

Screenshots of Changes

1. Accessing COVID-19 Data Extract

The screenshot shows a dark blue navigation sidebar on the left with the following items: Find Client, Add Client, Case Management, COVID-19 (highlighted in light blue), and Assessments. A yellow arrow points from the 'Assessments' item to the 'COVID-19 Data Extract' option in a sub-menu. The main content area shows a 'Client Alerts (1)' table with columns 'Date' and 'Summary'. The table contains one row with the text 'This client has no current Rele'.

Client Alerts (1)	
Date	Summary
	This client has no current Rele
